# Cyolo

Now You Can Extend Your Access Control Even Further

Cyolo PRO (Privileged Remote Operations) has long delivered secure remote access to your most sensitive systems. Now, its capabilities extend even further — covering inbound connectivity, internal support, external collaboration, and asset-driven access control.

Govern even OEM inbound connections

3rd Party VPN Control

Gain visibility and policy control over vendor-managed tunnels — enabling secure workflows and real-time oversight without disrupting operations.

Support internal users and devices

Secure Remote Assistance

Enable built-in, auditable support — with customizable approval levels to match your internal workflows, so help desk and field teams can assist safely and efficiently.

Manage asset access seamlessly

Asset Access Hub

Drive streamlined processes and smarter decisions with a centralized asset access view. Easily define and apply access policies using real-world asset context such as IP ranges, vendors, and functions.

Collaborate instantly with external guests

Instant Collaboration Link

Host secure, time-bound joint sessions — enabling fast collaboration with external experts without compromising control or compliance.
